- iTag digital tags replace old-fashioned hand-written and labeled tags when used with a mobile device.
- They enable property owners to digitally write their contact information so that people who find their lost article can scan an iTag with their mobile device and return the lost item.

3 Types of Standard Tags Available

Nylon Wrap Tag (50mm x 20mm)

Adhesive Tag (10mm x 20mm)

Tie On Tag (30mm)

iTag is not a tracking system. It won't help locate a lost item. It will help someone who finds a lost item return it to the property owner.

iTag digital tags are pre-coded with a link to the iTag.com website. End-users receive in-pack credentials which enable them to add or edit their personal information on iTag.com. They control the information that appears when the tag is read by a compatible smartphone. Visit iTag.com to learn how to read an iTag.

Applications: Anything Frequently Lost
